

Aegean Diving Services Launches LDU

ADS proud to announce the launch of its Lightweight Diving Unit (LDU)

Aegean Diving Services has developed a **Lightweight Diving Unit** in response to client's requirements for **low cost solutions** that can prove competitive on the Greek mainland, in particular Piraeus.

ADS LDU is small, compact and easily transportable **without compromising diver safety or ADS high standards**. The unit can be used shoreside or transferred onto a small work boat.

LDU is fully equipped with surface supplied air, communications, helmet mounted CCTV and lighting. Both equipment and procedures used conform to international diving safety standards.

Currently the LDU is able to provide the following:

- Underwater CCTV / Photographic inspections
- Class Approved Inwater Surveys
- Sale Surveys
- Blanking installation
- Propeller clearance

Currently for more complex operations Aegean Diving Services can draw on its larger mobile diving systems that are still operational in both Greece and the UK

Aegean Diving Services is constantly working to improve the LDU's operational capabilities and expand the services that can be provided. A testament to ADS's ability to constantly develop in accordance to client requirements.
